- 2. CIA. PIC/JR-14/60, Surface-to-Air Missile Facilities, Kapustin Yar/Vladimirovka Missile Test Center, USSR, Jul 60 (TCS)

REMARKS

Comparison of a sketch of an unusual configuration observed northwest of Stalingrad with aerial photography of Kapustin Yar/Vladimirovka Missile Test Center indicates that the reported configuration near Stalingrad bears a striking resemblance to a new type surface-to-air missile (SAM) launch site at Kapustin Yar.

Aerial photography of reveals a new type SAM launch 25X1D area at the Kapustin Yar/Vladimirovka Missile Test Center. 2/ Launch

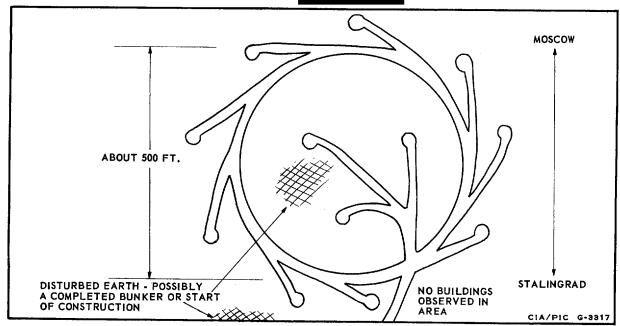

FIGURE 1. PINWHEEL CONFIGURATION OBSERVED NEAR STALINGRAD. This sketch is reproduced from CIA report TDCS-3/443,465.

Site "B" at this area has many similarities with the configuration observed near Stalingrad (see Figures 1 and 2). Major similarities are summarized below:

Stalingrad Configuration (as reported by source)

Very symmetrical appearance, like that of a pinwheel

9 pads on tangents out from a circular road

Roads and pads appear flush with surface of the ground

Roads and pads appear to be concrete

Circular road approximately 500 feet in diameter

Circular pad approximately 40 feet in diameter at end of each tangential road

Launch Site "B" (as revealed on photography)

Very symmetrical appearance, and if extended would form a circular pinwheel

4 pads on tangents out from a semicircular road, and if extended could accommodate 9 pads

Roads and pads are flush with surface of the ground

Roads and pads are concrete

Semicircular road approximately 500 feet in diameter

Circular pad approximately 55 feet in diameter at end of each tangential road

FIGURE 2. LAUNCH SITE "B" AT KAPUSTIN YAR/VLADIMIROVKA MISSILE TEST CENTER. Four tangential roads with circular pads at the ends extend out from the semicircle. This site has many similarities with the pinwheel configuration observed near Stalingrad.

25X1D

Based on information provided by the source, a scan was made of photography covering an area of approximately 30 square miles northwest of Stalingrad. The unusual configuration described by the source is not apparent on the photography.
